

If you or a family member have ever had fillings in your teeth that look like this. For the sake of your health, read on ....

... and then sign my UK Government petition at  
<http://epetitions.direct.gov.uk/petitions/2815>  
(The petition expires in early August 2012)

The unsightly silver grey/black material shown in the photograph is dental amalgam, which was first used to fill teeth in 1818. The material is a mixture combining 50% Mercury with other metals. Mercury is highly dangerous to all animal life causing a wide variety of ailments in humans and animals alike. It was widely believed that once the filling was placed in a tooth it remained bound in that filling material and could not escape into the body to cause any problems. This, so called fact, has been **disproven many, many times** and a study at Tübingen University<sup>1</sup> on 18,000 people clearly proved that mercury is constantly released and the amount doubles when chewing or drinking acidic liquids such as Orange juice.

**The larger the number of fillings the larger the amount of Mercury ingested.**

A recent study published in the Journal of Alzheimer's Disease 22 (2010) 1–18 DOI 10.3233/JAD2010100705 IOS Press <sup>2</sup> concluded that:-

**Mercury is the most probable cause of Alzheimer's disease and  
Dental Amalgam is the most probable source of that Mercury.**

A video showing the damage caused by mercury to brain neurons is available to download at <http://commons.ucalgary.ca/mercury/> and the first chapter of a new video fully explaining the dangers is available at <http://www.mercuryundercover.com/>

The evidence against these fillings is mounting and they should be banned at the earliest possible moment. I have started a petition on the UK government's website asking for a complete ban on the use of mercury in dental fillings. If there are 100,000 signatures to this e-petition the UK government is committed to debating the issue and, hopefully, ending the misery caused by these fillings once and for all.

If you agree that this procedure should be banned, please sign the petition at the following address and **forward this email to as many contacts** that you can find.

**<http://epetitions.direct.gov.uk/petitions/2815>**

If you are worried about your fillings, the above mentioned websites will guide you through the procedure. In the UK, the NHS should pay for the treatment but it is highly unlikely that they will. You will need to pay for private treatment but I believe it would be worth it. Copies of the studies mentioned above and referenced below are available on request.

Thanks for your help

John James
