WASHINGTON, DC – Key studies purporting to show no evidence of harm for Thimerosal, the mercury-based compound still used as a “preservative” in flu shots, are characterized by fraud and manipulation, according to vaccine safety advocates.

Ongoing criminal investigations in Denmark of Dr. Poul Thorsen, co-author of a pivotal study dismissing the link between mercury in vaccines and autism, suggest that he may have, in conjunction with staff from the Centers for Disease Control and Prevention (CDC), embezzled multi-millions of dollars. Further investigations also raise the specter that CDC staff inappropriately influenced the design, conclusions, and publication of that study and others.

Parents, researchers, and advocates from more than 10 countries, today, bombarded the Office of the Inspector General (IG) for Health and Human Services (HHS) with a unified call for congressional investigations into this matter.

Citing the known dangers of mercury, Rev. Lisa K. Sykes, President of CoMeD, Inc. stated:

“Injecting mercury into pregnant women and children is absurd. Examine studies which suggest otherwise, and you will find the funding for the study came from those who directly or indirectly profit from, or fear liability from, the use of mercury-containing vaccines.”

To support the ongoing efforts of CoMeD, Inc. with your tax-deductible contributions, please use the PayPal link on CoMeD’s Internet website, <http://www.Mercury-freeDrugs.org>. CoMeD, Inc. is a not-for-profit 501(c)(3) corporation that is actively engaged in legal, educational and scientific efforts to stop all use of mercury in medicine, and to ban the use of all mercury-containing medicines.
